MITOSIS WORKSHEET **Name:**

Match the term to the description

A. Prophase **B.** Interphase **C.** Telophase **D.** Metaphase **E.** Anaphase

_____ 1. The sister chromatids are moving apart.
_____ 2. The nucleolus begins to fade from view.
_____ 3. A new nuclear membrane is forming around the chromosomes.
_____ 4. The organization phase.
_____ 5. The chromosomes become invisible.
_____ 6. The chromosomes are located at the equator of the cell.
_____ 7. The nuclear membrane begins to fade from view.
_____ 8. The division (cleavage) furrow appears.
_____ 9. The chromosomes are moving towards the poles of the cell.
_____ 10. Chromatids line up along the equator.
_____ 11. The spindle is formed.
_____ 12. Chromosomes are not visible.
_____ 13. Chromosomes are replicated.
_____ 14. The reverse of prophase.

Fill in the blank. Some will be used more than once.

B. Interphase
A. Prophase
D. Metaphase
E. Anaphase
C. Telophase
F. Centromere
H. Spindle fiber
I. Cell Wall
G. Chromatid

_____18. What phase are daughter cells in as a result of mitosis?
_____19. During what phase of mitosis do centromeres divide and the chromosomes move toward their respective poles?
_____20. What is the phase where chromatin condenses to form chromosomes?
_____21. What is the name of the structure that connects the two chromatids?
_____22. In a chromosome pair connected by a centromere, what is each individual chromosome called?
_____23. What structure forms in prophase along which the chromosomes move?
_____24. Which phase of mitosis is the last phase that chromatids are together?
_____25. Which phase of the cell cycle is characterized by a non-dividing cell?
_____26. What structure is produced when protein fibers radiate from centrioles?
_____27. What forms across the center of a plant cell near the end of telophase?
_____28. The period of cell growth and development between mitotic divisions?
