Controlling the Internal Environment (p238)

Your body works most efficiently when the internal environment is reasonable constant.

1. Name five factors the body controls and keeps reasonably constant.

2. What does the term **homeostasis** mean?

3. What does homeostasis involve?

4. The body maintaining a constant environment can be likened to an air conditioner keeping a room at a constant temperature. Describe how an air conditioner works to maintain a constant temperature. Use a diagram as part of your answer.

Blood Sugar Control (p241)

To provide energy for your body throughout the day, your cells need a continuous supply of glucose for cellular respiration.

1. What happens when you have too much glucose in your blood?

2. What happens when you have too little glucose in your blood?

3. What is the concentration of glucose in the blood kept between?

4. Which two hormones regulate the concentration of glucose in the blood, and where are they produced?

5. Describe what happens after you eat and there is an increase in blood glucose levels.

6. Describe what happens after you exercise and there is a drop in blood glucose levels.

7. Draw a diagram to summarise the control of glucose in the blood.
