Precipitation Reactions Marking Rubric

Level 4 – The student understands that the properties and changes of ionic compounds are related to their structure.

Level 5 – The student understands the concepts used to explain the properties of ionic compounds and can identify that a chemical change has occurred.

Level 6 – The student understands the concepts used to explain the physical and chemical properties of ionic solids and can identify what chemical changes have occurred by writing a balanced chemical equation.

	Level 4	Level 5	Level 6
Compound Structure	- Identifies an ionic compound as being a metal + non-metal. - Identifies that the formation of a precipitate is a chemical change.	- Identifies an ionic compound as being a metal ion + non-metal ion. - Can distinguish between soluble and insoluble compounds. - Identifies that the formation of a precipitate is a chemical change.	- Identifies an ionic bond as the transfer of electrons between a metal and a non-metal. - Can distinguish between soluble and insoluble compounds. - Identifies that the formation of a precipitate is a chemical change.
Chemical Formula	- Identifies ionic compounds by their names.	- Represents an ionic compound by writing the correct ionic formula.	- Represents an ionic compound by writing the correct ionic formula
Chemical Equations	- Represents a chemical reaction using a word equation.	- Represents a chemical reaction using chemical formula. - Identifies the solid phase.	- Represents a chemical reaction by writing a balanced chemical equation. - Identifies the solid phase.
