Precipitation Reactions Practical

Aim: To observe precipitation reactions

Equipment:

Silver nitrate
Sodium chloride
Sodium hydroxide
Barium sulphate
Copper sulphate
Lead nitrate
Potassium iodide
Small test tubes
Test tube rack

Method:

1. Put a cm of solution A into a test tube.
2. Using the dropper, add 3 or 4 drops of solution B.
3. Observe what happens when you add solution B. Write your observations in the table.
4. If a solid forms, use the solubility rules to determine the name of the solid.
5. Write the formula of the solid in the table.

Solution A	Solution B	Observations	Possible Ion Combinations	Name of Solid formed	Formula of solid
Silver nitrate	Sodium chloride				
Silver nitrate	Sodium hydroxide				
Silver nitrate	Barium sulphate				
Silver nitrate	Copper sulphate				
Silver nitrate	Lead nitrate				
Silver nitrate	Potassium iodide				
Sodium chloride	Sodium hydroxide				

Sodium chloride	Barium sulphate				
Sodium chloride	Copper sulphate				
Sodium chloride	Lead nitrate				
Sodium chloride	Potassium iodide				
Sodium hydroxide	Barium sulphate				
Sodium hydroxide	Copper sulphate				
Sodium hydroxide	Lead nitrate				
Sodium hydroxide	Potassium iodide				
Barium sulphate	Copper sulphate				
Barium sulphate	Lead nitrate				
Barium sulphate	Potassium iodide				
Copper sulphate	Lead nitrate				
Copper sulphate	Potassium iodide				
Lead nitrate	Potassium iodide
