What are fossils?

What can fossils include?

The study of past life:

The scientist that reconstructs past environments based on fossil and geographical evidence:

How do you make a fossil?

What do you need?

1 –

2 –

3 –

What if you have a soft body (if you were a jellyfish or a worm for example)?

Where can you find good conditions for fossilisation?

How does this process work? (you may like to draw a diagram)

There are 4 types of fossils

1 –

Define:

Examples:

2 –

Define:

Age:

Example:

3 –

Define:

Example:

4 –

Define:

Moulds:

Casts:

Examples:

Environments best for Preserving Fossils

Permafrost –

Example:

Amber –

Example:

Tar –

Example:

Peat –

Example:

Dry Air –
