What are the <u>three</u> most important things the Brain needs to function well?

_____

_____

_____

Label the diagram of the brain

The brain is divided into two major hemispheres a feature termed lateralisation. Describe what the <u>Left Side of the Brain</u> is responsible for controlling:

- _____
- _____
- _____
- _____

Complete the table by inserting the **c**orrect term

Structure of the Brain/Nervous System	**Function**
	This lobe is involved in processing visual information
	Structure located at the base of the

	brain responsible for manipulating levels of wakefulness, tiredness, sleep response
	Structure which connects the left and right hemispheres of the brain
	Large part of brain which controls thought planning and intellectual function.
	Part of the brain responsible for body sensations, attention and language.
	Role is to control breathing, heart rate and vital functions.

The cerebellum does NOT control

A body temperature B posture

C co-ordination D balance

4a. Draw below the structure of a neuron. Clearly label these parts

AXON DENDRITE MYELIN SHEATH NUCLEUS CELL BODY

Explain how the neuron network passes a message along from a sensory receptor (e.g.hand touching a sharp object) to the brain.

_____

_____

_____

_____

_____

_____

_____

_____

_____

4c. Describe the **two** advantages of myelin sheath in a neuron

- _____
- _____

4d. State the differences between white matter and grey matter.

_____

_____

_____

_____

_____

4e. Where is the white matter located inside the brain? Describe one advantage of the positioning of white matter.

LOCATED_____

_____

ADVANTAGE_____

_____

4f. **Match** each type of neurons with its function

Sensory neurons	**Inter Neurons**	**Motor neurons**
_____	Pass information from sensory to motor neurons	
_____	Move messages to muscles and glands of body	
_____	Collect information from stimuli in sense organs	

5a. A survey was conducted to measure student's attitudes to completing homework

i. TICK THE CORRECT BOX to indicate whether each question is **positive or negative** for attitude to homework.

ii. In each space show how the survey questions would be marked. (Apply numbers 1-5 below each choice: strongly agree, agree etc.)

7. LITTLE ALBERT STUDY - A study was conducted on a child Albert aged 9 months at a psychology centre. The psychologist gave permission for the study to be conducted over 3 weeks.

The reactions of the child were tested in response to a white rabbit, a dog, a monkey, masks with and without hair and burning newspaper. At the start the child did not show fear of any of these stimuli.

When a loud unexpected noise was created by banging a hammer on a steel bar behind the child there was a fear reaction; the child trembled and crying. In order to see if this fear could be conditioned to the white rabbit, Albert was presented with a white rabbit while at the same time the loud noise was made with the hammer

The rabbit and the sound were presented 7 times over 7 days to Albert. After this the rabbit was presented to Albert on its own to see if there was a reaction.

During first 7 days

Loud noise + white rabbit → Fear (crying and trembling)

After 7 days

White rabbit → Fear (crying and trembling)

7a. What factor was the study trying to determine?

__To see if a certain stimuli can affect a particular response

_____

7b. Name the independent variable.__The rabbit and a noise/ rabbit without noise _____

7c. Name the dependent variable__the reaction of the boy_____

7d. Who were the participants ?____a 9 month old child_____

7e. Describe <u>two</u> ethical concerns with the experiment.

___1. Scaring a child can cause trauma mental harm_____

___2. Affect future development of child _____

3. Science expt. on a child … child cannot leave the expt.

4. Rabbit was scared too?

7f.When research is undertaken ethics are important to consider. Describe each of the following ethical issues related to research.

i) Confidentiality of the information

_____

_____

_____

_____

ii) Rights of the participant to withdraw

_____

_____

_____

_____

_____

8a. A runner is competing in a 12-hour marathon; during the race the runner uses both associative and dissociative thoughts. Categorise each example in the table below

Control of Breathing Enjoying the sunshine Listening to a song on iPod
Thinking of next break Thinking about a party Timing the laps

Length of stride Landing in middle of foot

Dissociative Thought	Associative Thought

8b. Athletes can use extrinsic motivation and intrinsic motivation to help boost their performance in competition.

i) Explain the difference between extrinsic and intrinsic motivation.

_____

_____

_____

_____

ii) Give TWO examples of each type of motivation for a runner.

Extrinsic motivation _____

_____

Intrinsic motivation _____

_____

8c. i) Explain what is meant by the term “Arousal Levels” in sports preparation.

_____

_____

_____

ii) Some sports require different levels of arousal before competing. Describe sports in which competitors would benefit from to increased or decreased arousal levels.

INCREASED AROUSAL_____

_____

DECREASED AROUSAL_____

_____

8d. Attitude has a powerful effect on athletes. One helpful strategy that a 24-hour ultra marathon runner recounts is to repeat a mantra or saying over and over. Link understanding
of psychology to explain how this could impact positively on the performance of the runner.

_____

_____

_____

_____

_____

_____

_____

9a. Your friend Dora applies for a job at a bookshop. She is interested in books and reads many different authors. She is nervous before the interview, saying she is worried she is not pretty or clever enough to get the job. You are listening to her concerns.

Write 3 tips to help Dora improve self-esteem before the interview

- _____
- _____
- _____

9b. The following characteristics describe aspects of **Low Self Esteem** and **High Self Esteem**. Place each correctly in the table below.

confident anxious clear steady voice blames self

belief in oneself upright posture smiling lack of eye contact

learns from mistakes puts down efforts withdrawn posture pride in appearance

LOW SELF ESTEEM	HIGH SELF ESTEEM

9b. How can a continued period of low self esteem be detrimental to an individual?

_____

_____

_____

_____

_____

_____

10. Research by Lewis and Brooks-Gunn (1979) involved a study of three male children aged 9 months, 15 months and 24 months each of whom were shown a mirror and observed carefully. Then each of the children were marked on their faces with a red dot on the nose. A mirror was presented a second time to each child and researchers recorded results in the table below.

Participant	**Age of child**	**Initial Behaviour with Mirror**	**Behaviour with Mirror & red dot on nose**
CHILD A	9 Months	Sucking on mirror	Sucking on mirror, crawling away
CHILD B	15 Months	Looking at mirror	Pointing at the mirror, pushing mirror across floor
CHILD C	24 Months	Smiling at Mirror Playing with hair	Pointing at the mirror, touching the end of their nose, smiling.

10a. The awareness people individuals have of themselves and of the world around them is referred to as the development of self understanding. In the Lewis and Brooks-Gunn study one child displays a lack of interest of which they termed a lack of self recognition.

Which child can be identified as lacking self recognition and explain why?

i) CHILD _____

ii) Why? _____

_____

_____

10b. Write one conclusion from the study _____

_____

_____

_____

10c. List one way to improve the study? _____

_____

_____

_____

10d.Describe an egocentric viewpoint which can be displayed by children.

_____

_____

_____

_____

11.Terry has just attended a First-Aid class during which he learnt a large amount of new information. He repeats this information to his mother when he gets home.

The sequence which best describes the memory process Terry used is

A. storage; retrieval; encoding.

B. encoding; storage; retrieval.

C. storage; encoding; retrieval.

D. retrieval; encoding; storage.

12. An example of chunking with large amounts of data is to group material into smaller meaningful sections. The digits of a mobile phone number could be grouped as 0403 331 260. Chunking is a method used to

A**.** increase the storage capacity of short-term memory.

B. increase the storage capacity of long-term memory.

C. decrease the storage capacity of short-term memory.

D. decrease the storage capacity of long-term memory.

13. .What is memory? Why is memory vital to learning?

_____

_____

_____

_____

_____

_____

14. Emma has forgotten the details of a traumatic incident that occurred to her when she was camping and bitten by a red-backed spider. Her father knows it was not a good memory as she experienced severe shock and had to be rushed to emergency medical attention. This behaviour is most likely an example of

A. retrieval failure.
B. motivated forgetting.
C. memory decay
D. memory input deficiency.

15. Kristy asked her big sister Mary to come with her on a bike ride. Mary had not ridden a bike since she was quite young but after a few minutes she was able to ride confidently. This is an example of Mary's _____ memory working well.

A. declarative
B. procedural
C. semantic
D. episodic

16. Michael began a job as a salesman for a pharmaceutical company. He had to learn the names and uses of the company's 30 products before he was allowed to begin selling. To test his knowledge, he was asked to state the names and uses of the 30 products (Task 1).

Michael did not do well on Task 1 so he was given a list of 40 products and their uses, including the 30 he had studied, and was asked to identify the original 30 products (Task 2).

Task 1 is a test of _____ and Task 2 is a test of _____ .

A. recognition; relearning
B. recognition; recall
C. recall; recognition
D. recall; relearning

/1

17. Garry is driving home from work when his wife calls and asks him to get a list of 10 items from the supermarket. Garry tries to repeat the list over and over to himself, in order, until he gets to the supermarket. Given Millers Theory of the magic number which of the items is Garry most likely to bring home?

A. items 1 and 2, 9, and 10
B. the middle three items
C. items 1, 2, 3 and 4, 5, 6, 7
D. the last nine items

/1

18. Which of the following behaviours is **not** dependent on learning?

A. avoidance of a food that made you sick the last time you ate it

B. salivating at the sound of a bell

C. pupil of the eye contracting when light is shone into your eyes

D. talking with friends /1

19 . Solomon Asch conducted an experiment in 1955. It was designed to research a particular idea on social interactions.

19a. Detail the hypothesis Solomon Asch was testing_____

_____ /1

19b. Describe the method Asch used for the experiment

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____ /3

19c. What was the role of the “fake participants”/ “planted individuals/ confederates” in Asch’s experiment?_____

_____

_____

_____ /2

19d. If you were responsible for conducting this experiment with Solomon Asch detail two examples of debriefing information that would be important to give to the participants?

_____

_____

_____

_____ /2

19e. Asch’s experiment was tested on 123 male participants aged 19- 25 and resulted in the following data

25% did not change their answer for any of the questions

50% changed their response to an incorrect response on at least 6 or more trial

questions

75% changed their response to an incorrect response on at least 1 trial question. What do the results indicate in terms of the social interaction Solomon Asch was interested in identifying?

_____

_____

_____

_____

_____ /2

19f. Suggest two improvements to the study conducted by Asch to improve reliability and validity of the results

i) Improvement One: _____

_____

_____

_____ /2

ii) Improvement Two: _____

_____

_____

_____ /2

20. A study was conducted using a list of 15 words . Students were either presented the words using a technique of mnemonics or without mnemonics – just reading the words. The table below records the average number of words recalled on Day 1 and words recalled in a follow-up on Day 5

	Day 1 Without Mnemonics	Day 1 With Mnemonics	Day 5 without Mnemonics	Day 5 with Mnemonics
Words recalled correctly	14	15	3	10

20a. Compare of the use of Mnemonics on Day 1, Is there a significant difference in recall?

_____

_____

_____

_____ /2

20b. Make a statement about the use of Mnemonics over time (on Day 5) and learning.

_____

_____

_____

_____

_____

_____ /2

21. Which of the following is not a characteristic of a group?

A. there are two or more people

B. there is interaction between members

C. the members do not share a common goal

D. members can influence one another /1

22. SOCIAL NORMS are important in all groups..

i) What are social norms?

_____

_____

_____

_____

_____

_____ /2

ii) Give 2 examples _____

_____ /1

23a. What is meant by deindividuation,.

_____

_____

_____

_____ /1

23b. Describe giving an example where this can occur

_____

_____

_____

_____

_____

_____ /2

24. *Diffusion of responsibility* is a term used by social psychologists.

Five teenagers have been told that they must clean the graffiti from a 10 metre long wall.

If one teenager had been set the task it would have taken 10 hours, so with five people working together it should be done in 2 hours. After three hours the job still isn't finished.

Based on your understanding of social psychology and behaviour in groups, explain how

diffusion of responsibility could account for time taken to clean the wall in this situation.

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____ /3

25. Circle one response True or False for each of the following

An example of conformity is when you change your hairstyle to be like your friends

T/ F

The principal in the school has lower social status than a maths teacher

T/ F

You are less likely to help someone if you have competent skills related to the situation.

T/ F

Answering the phone politely is an example of a social norm

T/ F

The size of a group can influence whether individuals will follow the group rules

T/ F

People who are happy or in a good mood are more likely act this way to others

T/ F

/6

26. Lily attended a week long camp with her basketball team, her room mates would sneak off for a cigarette and tease Lily for not joining them. On the third day of the camp, Lily went with them and had a cigarette. Her behaviour is best explained as:

A. Social status B. Conformity

C. Egocentric D. Prosocial behaviour

/1

27. Felicity is a good speller. Recently at a whole school spelling competition she found it very difficult to concentrate and was worried about her knowledge of words and how she would appear to others. Felicity's anxiety can be described by :

A Bystander effect B Audience Inhibition

C Prosocial Behaviour D Identity formation

/1

28. A friend Sam is walking in the library. Kathy smiles at Sam but gets no response from Sam she worries he is cross with her about something. Later Kathy asks Sam about this he explains that he was studying for a test that day and was concentrating on going through his notes.

The initial idea Kathy formed is termed:

A Peer Pressure B Social Norm

C Deindividuation D Fundamental Attribution Error

/1

29. Individuals in groups often conform by taking _____ risks in the group than when alone

A. more B. less

C. no more or less D. Significantly less

/1

30. Sometimes, group members may feel the group is so important that individual and critical thinking disappears, leading members of the group to make bad choices. This is called

A. peer pressure B. closed – mindedness

C. social status D. reciprocity principle /1

.

END OF EXAMINATION – CHECK ALL YOUR ANSWERS ARE COMPLETE
