BALANCING CHEMICAL EQUATIONS

Equal numbers of each type of atom must exist on either side of the equation. This is called the law of conservation of matter.

Some equations are already balanced

Eg

$C + O_2 \quad CO_2$

Some equations are not balanced.

Eg

Look at the numbers of each element on each side of the equation

Reactants	Products

Balanace one element at a time by placing a number (coefficient) in front of selected reactant or product.

Eg

It is now balanced.

Reactants	Products

Try these ones

Some will need more than one coefficient written

Eg

Now try these ones
