Nitrogen Cycle -

P. 66-71

Nitrogen makes up _____% of the atmosphere. It is required for the production of _____ and _____.

Steps of Nitrogen Cycle:

1. Nitrogen Fixation: conversion of nitrogen in the air to _____. Done in 2 ways: a) _____ b) _____.
2. Nitrates in soil taken up by _____
3. _____ consume these and use the amino acids to make _____.
4. Organisms produce waste and die. _____ break down nitrogen compounds into _____.
5. _____ is converted to nitrites, then to _____ by _____ in the soil.
6. Denitrification: Nitrates > nitrites > _____ released to air. Done by _____.

Human Impact: Agriculture (answer on back)

What is the impact of excess fertilizers on soils? What is the impact of run off of fertilizer into bodies of water?
