2.3.1.7 The graph shows the different flowering times for plants in the Kosciuszko National Park.

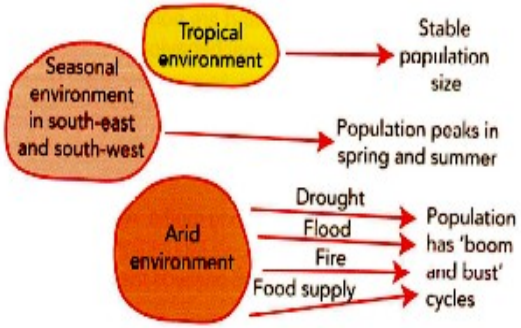

(a) What trend is shown in this graph?

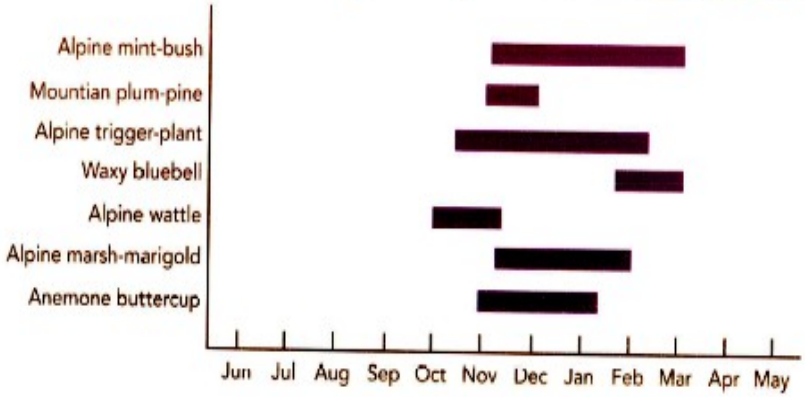

(b) How would this trend affect the population sizes of insects and larger animals in the area?

2.3.1.8 Rodents include mice, rats, squirrels, guinea pigs and hamsters. The flow chart shows how the population of rodents varies in different areas.

Why would arid environments have 'boom and bust' cycles of rodent population sizes while tropical environments have a stable rodent population size?
