Carbon and Nitrogen cycle video

Name_____

1. Carbon and nitrogen can both be formed in _____
2. Carbon is needed to make the ‘big 4’ b_____
3. _____ chemistry studies molecules containing carbon
4. A reservoir is _____
5. Some reservoirs for carbon are: _____
6. How does carbon originally get into living things? _____
7. How does carbon get from one organism to another? _____
8. How does carbon get back into the air from an organism? _____

Nitrogen

9. Nitrogen is needed to make _____ and _____
10. Nitrogen makes up _____% of the atmososphere
11. Nitrogen fixing means taking it out of the atmosphere. What organisms do this?

    _____
12. Plants and animals can only use nitrogen if it is **fixed / unfixed**
13. Nitrogen-fixing bacteria turn **nitrogen gas /ammonia / nitrates** into **nitrogen gas /ammonia / nitrates**
14. Nitrifying bacteria turn **nitrogen gas /ammonia / nitrates** into **nitrogen gas /ammonia / nitrates**
15. Does nitrogen have to go all the way back into the atmosphere before it is used by plants again? **Yes / no**
16. What form is nitrogen in when something is decomposed? _____
17. Denitrifying bacteria turn **nitrogen gas /ammonia / nitrates** into **nitrogen gas /ammonia / nitrates**
18. Describe how excess nitrogen (e.g. from fertilisers) can harm marine life

    _____

Review: define the terms and give 5 examples of things that are in each

Atmosphere

Lithosphere

Biosphere

Hydrosphere

Draw and label a diagram of the water cycle
