Name: _____

IONIC FORMULA WORKSHEET

PART A: WRITING IONIC FORMULA

Write the ionic formula for Zinc chloride

Step 1. **Write the symbols for each element**

Zinc – Zn Chloride – Cl

Step 2. **Write down the charge for the cation (positive ion) and anion (negative ion)**

Zn^{2+} Cl^{-}

Step 3: **Combine cation with anion and swap charges**

$Zn^{-}Cl^{2+}$

Step 4: **Remove charges and move numbers to the bottom**

$ZnCl^{2}$ → **$ZnCl_{2}$**

Try to work out the formula of the following ionic compounds

Sodium chloride

Step 1:

Step 2:

Step 3:

Step 4:

Magnesium oxide

Step 1:

Step 2:

Step 3:

Step 4:

Potassium Iodide

Step 1:

Step 2:

Step 3:

Step 4:

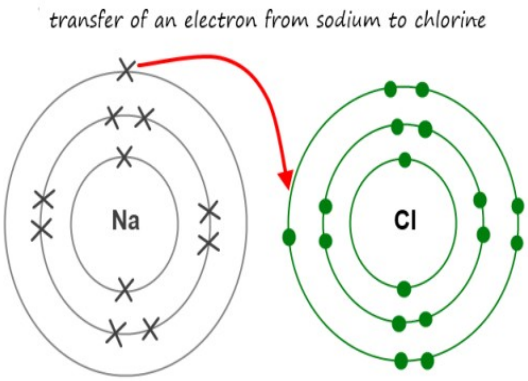

Calcium oxide

Step 1:

Step 2:

Step 3:

Step 4:

Name: _____

Write chemical formulas for the compounds in each box. Example: The first box is the intersection between the "zinc" cation and the "chloride" anion, so you should write "$ZnCl_2$", as shown.

	zinc	*iron (II)*	*iron (III)*	*nickel*	*silver*	*lead*
chloride	$ZnCl_2$					
iodide						
bromide						
oxide						
sulphide						
flouride						

PART B: NAMING IONIC COMPOUNDS

When naming ionic compounds you must use the following naming rules

1. Always name the metal ion (cation) first

2. The anion is named second and is **not capatilised**

Nacl – Sodium chloride

Write the names of the following Ionic compound

1. CrO
   Cation –
   Anion –
   Name -

2. HgS
   Cation –
   Anion –
   Name -

A little bit more!!!

Work out the names of the following Ionic compounds in your workbook.

CaO	AgBr
BaO	CdF_2
PtO	CaF_2
Al_2O_3	AuF_2
Fe_2S_3	$ZnCl_2$
LiCl	LiS

Name: _____

3. AlF_3
   Cation –
   Anion –
   Name -
