Use the food web below to answer the questions that follow.

A Food Web in a Grassland Ecosystem With Five Possible Food Chains

1. Which organism is the producer?

2. Which organisms are herbivores?

3. Which organisms are carnivores?

4. Which organism is a 2 order consumer?

5. What do the arrows represent?

6. Where does all the energy for this food web come from?

7. What would happen if the all the rabbits died?

8. A lizard lives by a river. The river is cold and deep. The lizard eats the small ants and beetles that live by the river. Sometimes the air temperature near the river

gets to 40 degrees centigrade. When it is hot the lizards hide under the broad leaved plants that live near the river. In winter it gets cold so the lizards dig holes into the soil near the river bank. In spring the wind is often strong so the lizards hide under rocks that lie along the river edge. Theses rock also give the lizards a good place to hide from birds that like to eat the lizards.
Into the table below list the biotic and abiotic factors of the lizard's habitat.

Biotic factors	Abiotic factors

9. Complete the table below.

Word	Meaning
Abiotic factors	
Biotic factors	
Commensalism	
Ecosystem	
Mutualism	
Parasitism	
Parasite	
Host	

10. A dichotomous key is a series of paired statements (couplets). The scientist will read the first statement in the couplet that describes some characteristic of that organism. If

the statement is true, then the scientist will follow the directions given after that statement. If the statement does not fit the organism, the scientist will read the second statement in the couplet. If the first statement did not match the organism, the second statement should. As the scientist works through the key, he or she will either identify the organism or continue to another couplet.

Instructions: Use the key below to identify the species name of each of the smileys below.

1. Teeth visible .....go to 2
.....Teeth not visible .....go to 4

2. Has a wide, toothy smile .....Smilus toothyus
....Is not smiling .....go to 3

3. Visibly crying .....Smilus dramaticus
.... Frowning .....Smilus upsettus

4. Eyes are symmetrical .... go to 5
....Eyes not symmetrical .....go to 8

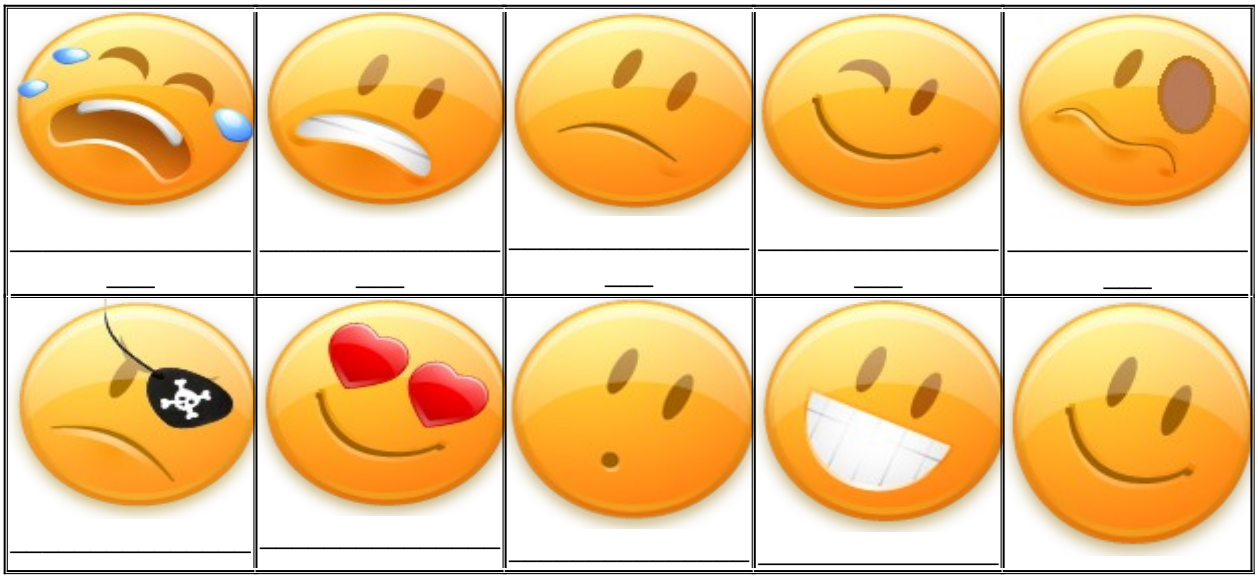

5. Eyes shaped like hearts ..... Smilus valentinus
....Eyes are shaped as ovals .....go to 6

Smiling, happy face ..... Smilus traditionalis
.....Not happy, frowning or other .....go to 7

7. Mouth curved down, frowning .... Smilus saddus
.... Mouth is a small circle .....Smilus suprisus

8. Has a pirate eye patch .....Smilus piratus
....Does not have eye patch ..... go to 9

9. One eye is much larger than the other eye
..... Smilus mutatus
One eye is winking .....Smilus winkus

___	___	___	___	

11.Binomial nomenclature is a system of naming living things by giving each a name made of two parts. It is called a binomial name or a scientific name. The first part of the name identifies the genus to which the species belongs; the second part identifies the species within the genus. For example, humans belong to the genus *Homo* and within this genus to the species *Homo sapiens*. These names are important because they allow people throughout the world to communicate about animal species with less confusion.

Binomial name	Common name
Rattus norvegicus	**Brown rat**
Rattus pyctoris	**Himalayan rat**
Rattus rattus	**House rat**
Rattus tiomanicus	**Malayan field rat**

a. What is the species name of the House rat?

b. What is the genus name of the Malayan Field rat?

c. Below are listed 4 types of dolphin.

Common name	Binomial name
Common dolphin	**= *Delphinus delphis***
Bottle-nosed dolphin	**=*Tursiops truncatus***
Spinner Dolphin	**=Stenella longirostris**
Striped Dolphin	**= Stenella coeruleoalba**

I. Are all dolphins in the same species?
II. Are all dophins in the same genus?
III. Of the 4 listed dolphins above how many are in the same species?

IV. Of the 4 dolphins above how many are in the same genus?
