Invasive species video

1. What are the three examples of invasive species that they give?
    - _____
    - _____
    - _____
2. What are the things called that keep an ecosystem in balance?

    _____
3. What are some examples of limiting factors?
    - _____
    - _____
    - _____
4. What are some natural ways that species can be moved around the world?
    - _____
    - _____
    - _____
5. Think: what ways do we try and stop the spread of weeds/diseases/other invasive species?

    _____

    _____

    _____

Ecological Relationships video

1. Think: give three examples of **prey** and **predators**

_____ _____

_____ _____

_____ _____

2. When the numbers of predators increase, the number of prey **increases / decreases**
3. In a normal ecosystem the number of prey and predators will fluctuate (change up and down) but overall they will be **balanced / unbalanced**
4. True or false: Predators can also be prey _____
5. All things in an ecosystem have to _____ with each other for food, shelter, mates etc.
6. There are three types of _____ relationships (write the three types below with examples underneath)

P	C	M
The relationship is positive for one animal and **positive / negative / neutral** for the other (circle)	The relationship is positive for one animal and **positive / negative / neutral** for the other (circle)	The relationship is positive for one animal and **positive / negative / neutral** for the other (circle)
