Food Chains and Food Webs Assessment

Part 1: Match the food chain related words below to their definition. (11 marks)

habitat, environment, adaptations, food chain, producer, consumer, decomposer, carnivore, herbivore, omnivore, food web

Word	Definition
	An organism that eats only meat
	An organism that gets its energy from eating other organisms
	An organism that can produce its own food from an energy source, such as the sun.
	The sequence of who eats whom in a biological community. Shows the flow of food energy.
	The place where an organism lives.
	An organism that only eats plants.
	Organisms which feed off dead plants and animals to break them down.
	The conditions that affect an organism in its habitat.
	The network of all the inter-related food chains in a biological community.
	An organism that eats both plants and animals.
	The features an organism has to help it survive in its environment.

Part 2: Use the information over the page to create a food web to show the feeding relationships between the different organisms in the community.

You will need to:

- Write the names of each organism clearly and neatly
- Draw arrows between the organisms showing the flow of energy between them (be careful which way you draw your arrows)

You may:

- Draw pictures of the animals
- Add colour

In an Australian biological community, grasses and flowering plants are eaten by insects, kangaroos, mice and rabbits.

Snakes and foxes are carnivores who feed on small animals. In this community, they mainly feed on rabbits and mice.

Kookaburras mainly feed on insects, but will also eat snakes and mice. Hawks feed on small animals. In this community, they eat rabbits, mice and snakes.

Dingoes are carnivores who feed on kangaroos and rabbits.

Part 3: Answer the following questions.
(9 marks)

1. In your food web, name two producers.

2. In your food web, name two primary consumers.

3. In your food web, name three secondary consumers.

4. Which important type of organism is missing from this food web and what do they do?
