Types of Mixtures

What is a mixture?

_____, _____, _____, _____, and _____ are not pure substances but are _____.

A mixture is made from _____ that have been stirred together.

_____

For something to be a mixture, _____.

Solutions

When _____ is stirred into _____, the sugar _____.

The _____ sugar breaks up into _____, too small to see and _____ into the water.

Although the sugar can't be seen, you can tell it is still there because you can _____.

A substance that dissolves is said to be _____.

An example of a soluble substance is _____.

A substance that doesn't dissolve is said to be _____.

An example of an insoluble substance is _____.

When you stir sugar into water, you make a _____.

The substance that dissolves is called the _____. In this example, the _____is the solute.

The substance that dissolves the other one is called the _____. In this example, the _____ is the solvent.

For each of the following solutions, identify the solute and the solvent.

Solution	Solute	Solvent
Seawater		
Black coffee		
Soft Drink		

Properties of Solutions

Light passes easily through solutions. They are _____ and _____.

Solutions can be _____ or _____.

Seawater is a _____ and _____ solution.

Cordial is a _____ and _____ solution.

Concentration

Concentration is a way of measuring the amount of _____ in a _____.

If there is a lot of solute dissolved, then the solution is _____.

Is there is only a little solute dissolved the solution is _____.

An example of a concentrated solution is _____.

Before you drink the cordial, you need to _____.

Figure 4.1.6 Concentrated solutions have a lot of solute dissolved in them while dilute solutions have very little.

Suspensions

A suspension is a mixture made when one substance doesn't dissolve in the other and separated id left to stand.

An example of a suspension is a mixture of sand and water. The sand settles to the bottom when it is left.
