WORKSHEET: CHEMICAL FORMULAE

1. ***Without looking at your notes***, write the symbol and valency for the following ions. The more you can commit to memory, the easier it will be to write formulae correctly.

potassium ion	nitrate ion
magnesium ion	calcium ion
hydroxide ion	sulphate ion
aluminium ion	oxide ion
chloride ion	sodium ion
silver ion	carbonate ion
phosphate ion	sulphide ion
zinc ion	iron (III) ion
bromide ion	copper (II) ion

2. Write the names for the following compounds. ***Note - some of them are not ionic!***

$MgCl_2$	KNO_3
$BaSO_4$	NO_2
Zn_3N_2	$(NH_4)_2CO_3$
K_3PO_4	N_2O_4
P_2O_5	CO
$Fe(OH)_3$	Na_2S

3. Write the formulae for the following compounds. Show the ions you are using - it helps!

sodium chloride	aluminium oxide
calcium chloride	magnesium sulphate
potassium hydroxide	aluminium sulphate
potassium sulphide	copper (I) bromide
magnesium nitrate	calcium phosphate
silver oxide	iron (III) sulphide
aluminium chloride	sodium sulphate
calcium carbonate	zinc nitrate
aluminium sulphide	zinc bromide
sodium carbonate	magnesium phosphate
