Worksheet 6.3

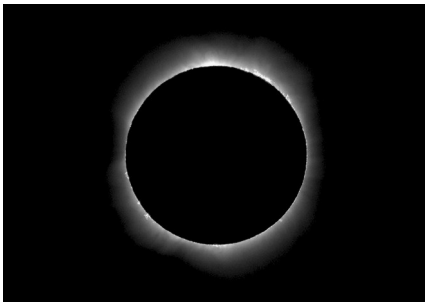

Science Quest 7: pages 223–225

Eclipses

Student: ..... Class: .....

Solar eclipse

1. The following photograph shows a total solar eclipse.

© Newspix/AFP photo/ Torsten Blackwood

Total solar eclipse **Partial solar eclipse**

(a) Explain how such an eclipse can occur.

.....

.....

.....

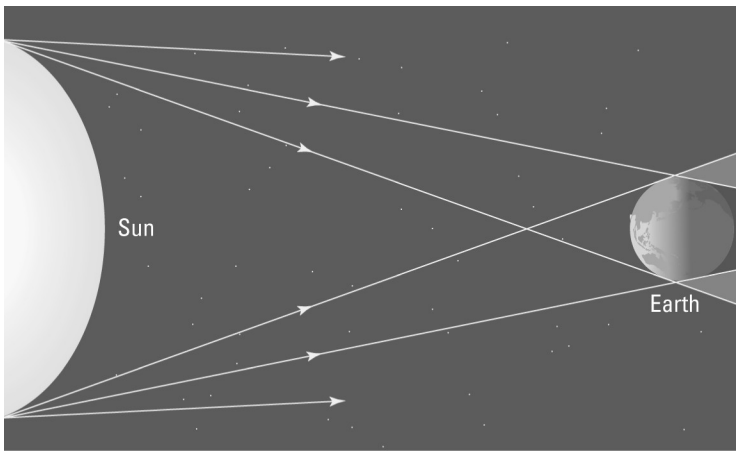

(b) What part of the sun can now be seen? .....

(c) Draw the image of the sun in a partial solar eclipse.

(d) Explain why total solar eclipses can occur only when there is a new moon. Use a labelled diagram as part of your answer.

Lunar eclipse

2. The following ray diagram is incomplete.

(a) Using a ruler and pencil, extend the rays of light from the sun past the Earth to create the shadow zones.

(b) Draw in the position of the moon when a total lunar eclipse occurs.

(c) Shade and label the shadow zones called the umbra and penumbra.
